EDUCATION

1337 Coding School

Khouribga, Morocco

Software Engineering Program, 2023 - Present

Peer-to-peer, project-based program in software engineering with hands-on work in C, C++, Linux, and full-stack development.

PROJECTS

WebServ - HTTP/1.1 web server (C++) - [GitHub](#)

- Capable of handling GET, POST and DELETE requests using an event-driven architecture with Kqueue.
- Static file serving and dynamic content generation using CGI with support of (php, py, js, pl, sh) file extensions.
- Support for cookies and session management with two dynamic applications in C++ and Python as examples.

Ft_Transcendence - Online Multiplayer Gaming Platform (TypeScript, Python) - [GitHub](#)

- Capable of running multiple games between different users concurrently using Django.
- Offers Complete Users management system with three different authentication methods.
- All run on top of Docker using multiple containers for each service.

Agentic Q&A System - Conversational AI Agent (Python, TypeScript) - [GitHub](#)

- Built a full-stack Chat system that reads your documents and answers questions with Citations.
- Provided an Injection endpoint that accepts Urls to Scrape and store in a Vector database (PineCone).
- Manages messages/conversation history and stores them in a PostgreSQL database.
- Developed using LangChain, FastAPI, PineCone and NextJs.

Commodore 64 Emulator (C) - [GitHub](#) | [Live Demo](#)

- Implemented complete CPU emulation, memory management, hardware timing simulation.
- Developed a debugger which lets you view the contents of RAM, VIC-II registers, CIA 1 and 2 registers
- Ported into the web using WebAssembly.

Trading Client - High-Performance Trading System (C++) - [GitHub](#)

- Built a real-time order execution and management system for crypto trading.
- Implemented WebSocket-based market data streaming.
- Used the Deribit API to retrieve market data and execute trades.

WORK EXPERIENCE

Agentic AI Intern - Titan Network

Uk, Remote

2025 - 2026

- Built full-stack AI applications with complex RAG workflows, serving thousands of active users in production..
- Developed automated data workflows using n8n, Python, and SQL to process data and connect APIs efficiently
- Managed production deployments, adding monitoring systems to ensure enterprise-level stability.

SKILLS

Programming Languages: Python, C, C++, JavaScript, TypeScript

Technologies & Tools: Git, Docker, Linux, PostgreSQL, PineCone, Langchain, FastAPI, NodeJs,

Topics: Software Development, Full Stack Web Development, Agents AI Developments.
